

Working with the Banner (banner.xml)

The banner module may appear simple, but it's loaded with options. Below is a list of them:

GLOBAL SETTINGS

`<width>`

the width of the banner

`<height>`

the height of the banner (the banner will add 32 pixels for the control bar automatically)

`<autoPlay>`

choose to auto-play the banner, true or false

`<useNumButtons>`

choose to use the numbered buttons or not

`<invertButtons>`

true = the default behaviour for button color, button backgrounds will be inverted

false = buttons will have a black transparent background

`<randomizeOrder>`

choose to randomize the slide order true or false

`<randomSlide>`

for autoPlay, load in a random slide every time

`<infoBehaviour>`

options are "forceOn" (always show info after slide wipes in), "forceOff" (never show info after slide wipes in), "perSlide" (adjust info behaviour per slide)

`<useInfoButton>`

If set to false, the info button will never be shown. If set to true, you can adjust it per slide below -->

`<useStylesheet>`

choose to use a CSS stylesheet, true or false

`<stylesheetURL>`

the url of your CSS stylesheet

SLIDE SETTINGS

```
<item>
  <image>images/banner/img1.jpg</image>
  <delay>3</delay>
  <fadeType>bars</fadeType>
  <fadeOver>true</fadeOver>
  <showInfo>true</showInfo>
  <useInfoButton>true</useInfoButton>
  <link>http://www.google.com</link>
  <linkTarget>_blank</linkTarget>
  <title><![CDATA[<!-- BEGIN -->The Title<!-- END -->]]></title>
  <description><![CDATA[<!-- BEGIN -->Description<!-- END -->]]></description>
</item>
```

`<image>`

The url of your slide. This can be an image or swf

`<delay>`

The delay per slide if autoPlay is used. This is a number in seconds

`<fadeType>`

Options are "bars" and "basic". Basic is a simple fade in.

`<fadeOver>`

Options are true and false. Choose to wipe the new slide in on top of the previous slide (true), or wipe the previous slide out first (false).

`<showInfo>`

Only relevant when "perSlide" is chosen in the global settings. Choose true if you want to automatically show the info when a slide wipes in, or false if you want them to have to click on the info button instead.

`<useInfoButton>`

Choose to show or hide the info button. This is useful when you're auto-showing the info

`<link>`

Choose to turn the slide into a clickable link. Leave blank if the slide should not be clickable.

`<linkTarget>`

Only relevant if slide is also a link. This is the link's window target

`<title>`

The info title. This is HTML compatible.

`<description>`

The info description. This is HTML compatible.
