

Changing Fonts in the Q

All fonts can be styled with CSS. So you won't need to worry about opening any of the .fla files to change color, font-size, etc.

You will, however, need Flash CS3 or higher to add special characters, change the language of the font, or change the font family.

Here's a nice tutorial about how to embed special characters:

<http://blog.activeden.net/resources/common-questions-by-flashden-buyers/common-questions-using-special-characters-like/>

And here's a tutorial on how to download and install a trial version of Flash:

<http://blog.activeden.net/resources/common-questions-by-flashden-buyers/buyer-faq-downloading-installing-flash/>

When changing the font-family, make sure the new font is embedded. The tutorial above on embedding special characters is a good reference for how to embed a font in Flash.

Finding the fonts in each module

Each module has two specific folders for embedded fonts and text fields. These folders can be found in the asset library. They are named:

1) fonts

2) text fields
